ECONOMETRICS 1 EXERCISES 1

Covariance matrices

- 1. Let $\mathbf{X} = (X_1, \dots, X_k)'$ a $k \times 1$ random vector, α a scalar, **a** and **b** fixed $k \times 1$ vectors, and *A* a fixed $g \times k$ matrix. Then, provided the moments considered are finite, show that the following properties hold:
 - (a) $\mathsf{E}(\mathbf{X} + \mathbf{a}) = \mathsf{E}(\mathbf{X}) + \mathbf{a}$;
 - (b) $E(\alpha \mathbf{X}) = \alpha E(\mathbf{X})$;
 - (c) $\mathsf{E}(\mathbf{a}'\mathbf{X}) = \mathbf{a}'\mathsf{E}(\mathbf{X})$, $\mathsf{E}(A\mathbf{X}) = A\mathsf{E}(\mathbf{X})$;
 - (d) $V(\mathbf{X} + \mathbf{a}) = V(\mathbf{X})$;
 - (e) $V(\alpha \mathbf{X}) = \alpha^2 V(\mathbf{X})$;
 - (f) $V(\mathbf{a}'\mathbf{X}) = \mathbf{a}'V(\mathbf{X})\mathbf{a}$, $V(A\mathbf{X}) = AV(\mathbf{X})A'$;
 - $(g) \ \mathsf{C}\left(a'\mathbf{X}, b'\mathbf{X}\right) = a'\mathsf{V}\left(\mathbf{X}\right)b = b'\mathsf{V}\left(\mathbf{X}\right)a \ .$
- 2. Let $\mathbf{X} = (X_1, \dots, X_k)'$ be a random vector with finite second moments and let $\boldsymbol{\Sigma} = V(\mathbf{X})$ be its covariance matrix. Prove the following properties.
 - (a) $\Sigma' = \Sigma$.
 - (b) Σ is a positive semidefinite matrix.
 - (c) If there exists a nonzero $k \times 1$ fixed vector **a** and a constant *b* such that $\mathbf{X}'\mathbf{a} = b$ with probability one, then $\Sigma \mathbf{a} = 0$ and Σ has rank less than *k*.
 - (d) If the matrix Σ is singular, then there exists a nonzero $k \times 1$ fixed vector **a** and a constant *b* such that $\mathbf{X}'\mathbf{a} = b$ with probability one.
